

MDS 1.0 yd Bucket or Replacement Bucket for JD Classic Style

For a short period of time, John Deere manufactured loader models 563, 673, 740, 741 & 746 with the option of 3 different attachment carriers (Classic, Global, or Skid steer). During this time, their grapple spacing was 59.125" (as noted above). These models were later replaced with the 'H' Series models (H260, H310, H340 & H380) which utilizes the Global carrier only. In order to accommodate the H480 loader which is wider (Global Tier II carrier), the grapple mounts were moved out to the 66.875" setting. This is the setting that MDS will use on all 1.0 yd and JD Classic buckets from now going forward ---- with the exception of the 6' bucket --- this setting is too wide so will stay at "old" setting. The MDS 'wide' grapple (part numbers GF52-4B, GF52-4G, GF52-5B, & GF52-5G) will not change and will continue to accommodate all of these changes to spacing. Use the chart below to assist in determining grapple / bucket compatibility.

	MDS GRAPPLE	NEW JD GRAPPLE FOR H SERIES	OLD 740 GRAPPLE
MDS BUCKET - NEW 67" SPACE (7' or wider)	X	X	
MDS BUCKET - 6' wide or less	X		X
MDS BUCKET - 59" SPACE	X		X
JD H SERIES BUCKET	X	X	
JD 563, 673, 740, 741, or 746 BUCKET	X		X
